DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10 May 2004 has been entered.

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the continuous upper surface of varying width must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Art Unit: 1744

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Rau et al (German patent 2,350,302).

The patent to Rau discloses the invention as is claimed. Note figures 1 and 2 which show a unitary elongate curved beam (10) having protective end formations (13,16) thereon. Also, note that the curved beam (10) is of varying thickness (fig.1) and varying width (fig.2) along its length. Note that the width is increased near the connecting member (15).

With respect to claim 3, defining that the deformations are a result of folding appears to relate to the manner of manufacture and does not act to define over the structure of Rau.

Art Unit: 1744

Claims 1-3 and 6-7 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Kohler (German patent 2,311,293).

The patent to Kohler discloses the invention substantially as is claimed. Note figure 1 wherein the free form curved beam (10) is of varying thickness along the length thereof and the ends (17,19) are of various thickness, are deformed and project beyond the end of the blade (22). The upper surface of the beam appears to have varying widths as can be seen from figure 7. The upper surface of the beam of Kohler is considered to be continuous as far as such defines any particular structure. The upper surface is wholly joined.

With respect to claim 3, defining that the deformation is a result of folding appears to relate the manner or method of manufacture and does not act to define over the structure of Kohler.

Response to Arguments

Applicant's arguments filed 10 May 2004 have been fully considered but they are not persuasive. Applicant's arguments with respect to the Kohler rejection are noted but not persuasive. Applicant's arguments that the upper surface of Kohler is discontinuous since it has slits (30) is not persuasive. Even though the Kohler beam has slits therein, the upper surface is still considered to be continuous since it is wholly joined together. In other words, the surface of components (18,20) are continuous with that of the surface of (10). The surfaces are not isolated.

Art Unit: 1744

Allowable Subject Matter

Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gary K Graham whose telephone number is 571-272-1274. The examiner can normally be reached on Tuesday to Friday (6:30-4:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Warden can be reached on 571-272-1281. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
